RESOLUTION

THE BURT TOWNSHIP BOARD having reviewed the many design alternatives examined in the report entitled "Grand Marais Harbor Rehabilitation Design Alternatives" "Final Report", Report OEL-2001, respectfully designates the following:

OUR FIRST PREFERENCE is the recommended proposed breakwater design of a rubble mound wall constructed on the line of the original pile dike breakwater. If due to years of shore erosion the extended length of wall required to construct such a breakwater, and reach Lonesome Point, requires a greater appropriation than is possible to obtain, the township designates the following second preference as an acceptable alternative.

OUR SECOND PREFERENCE is the recommended breakwater design of rubble mound wall constructed 15 degrees south of the line of the original break wall to the vicinity of Kahle Park. We ask that efforts be made to add the construction of a concrete walkway and railing atop the wall. And further, following construction of the wall that the flow of the Sucker River be diverted so as to flow into the harbor.

Roll Call Vote was Taken:

Durrwachter	Aye
Savage	Aye
Seibert	Aye
Benmark	Aye
Leavenworth	Aye

Motion carried. *Lori Savage*
